The Evolution of a Floating Mushroom		
A tiny bit of mineral collides into an asteroid in space. It makes a crater and embeds itself into the rocky surface.	A carbon molecule inside the mineral gets its nutrients from the mineral. It starts eating and with every space it creates inside the mineral, it replicates itself.	As it becomes a large group of molecules, the shape of a mushroom roots break out and...

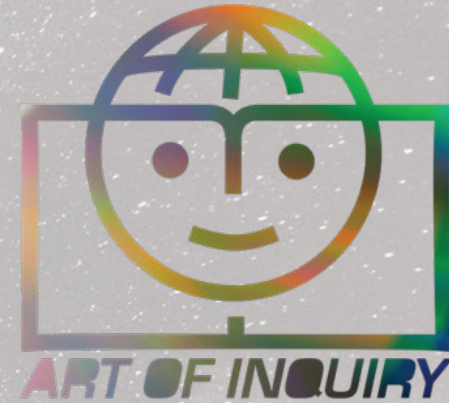

Hi, we're humans, this is our planet,
 let's use all the resources and pollute it,
 now, we can't live on this planet,
 so now we're on a new one to do it all again...

"Astrobiology ... brings together social studies, space studies, and biology. It brings us together!"

Earthlings Hub
for refugee kids in Ukraine

Earthlingshub.org

Inquiry-based education for refugee children, led by a dedicated team of scientists, educators, and psychologists.

Earthlings Hub is administered by US-based international 501(c)(3) non-profit Blue Marble Space.
